

Agroecological Innovations for Resilience and Sustainability of Alpine Livestock Farming Systems:

INVERSION

Marzia Ranaldo, Paolo Bàrberi & (Stefano Carlesi) marzia.ranaldo@santannapisa.it

Alpine Livestock Farming Systems Issues (Giudicarie, Trento)

- Intensification of dairy farming
 Higher external input (concentrate feed)
 Livestock increased in number
 Reducing number of little farm (profitability)
- Monoculture instead of pasture
- Land abandonment
- Low economic suitability
- Reduction of animal welfare
- Environmental risk due to a high level of slurry production

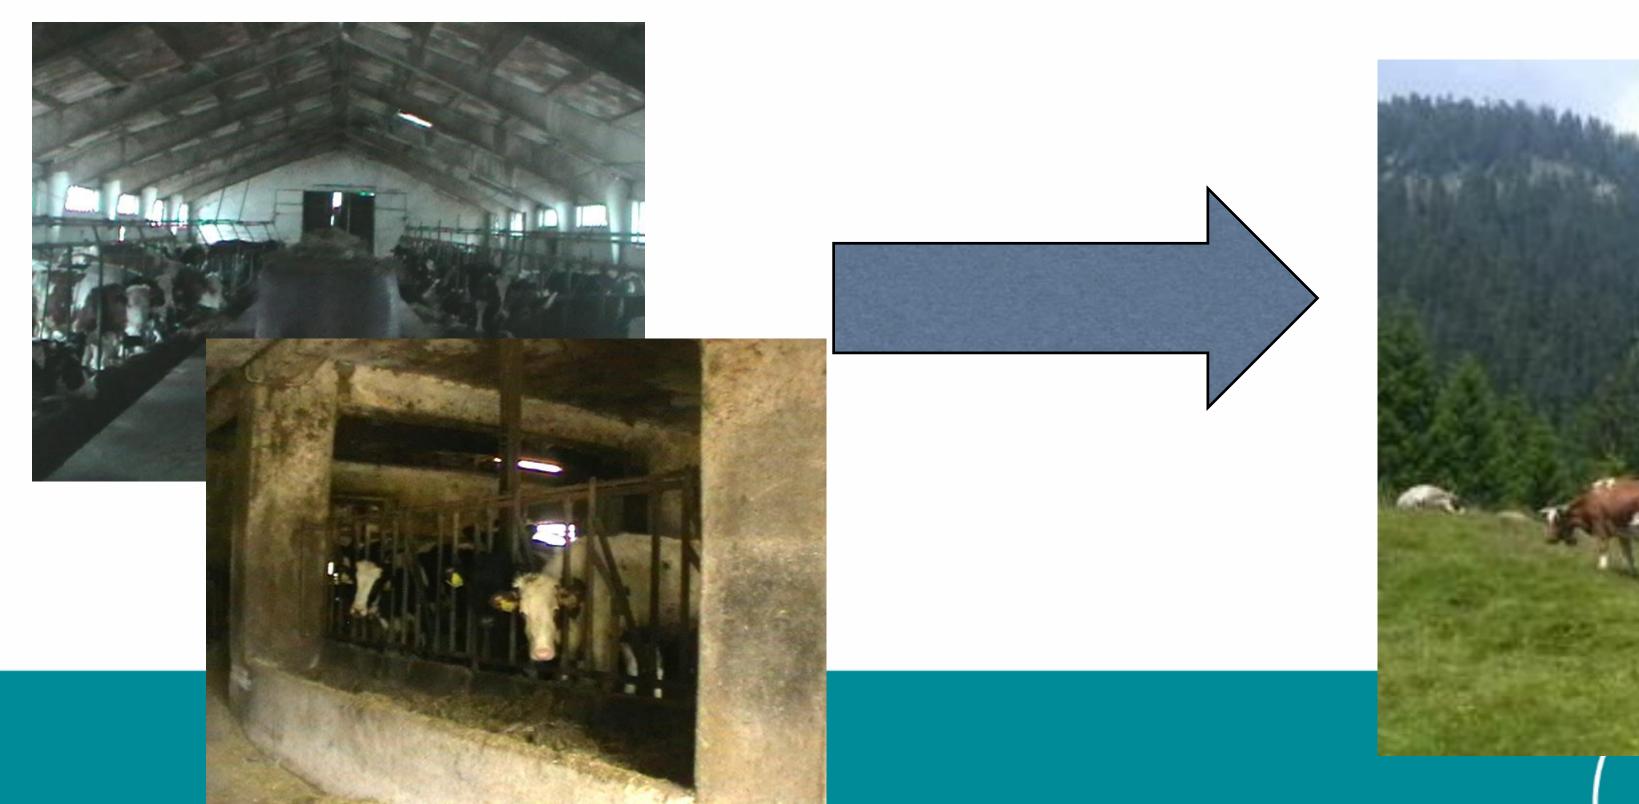

Loosing
Linkage to territory:
identity

Higher concentrate costs
Lower milk price

Farmers from a valley (Trento) from different municipality

Bottom up willingness of change (even too much @)

A gradient of Farms

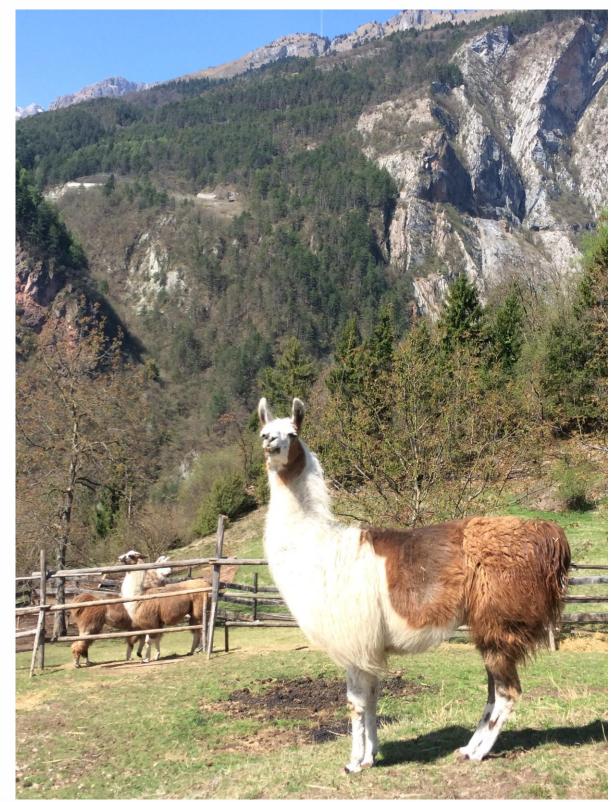

Agrilife
Athabaska
Maso Pisoni

Fornas de Curè Marchetti Cargos

Diversified farming

A gradient of Farms

Agrilife
Athabaska
Maso Pisoni

Fornas de Curè Marchetti Cargos

Intensive dairy farming

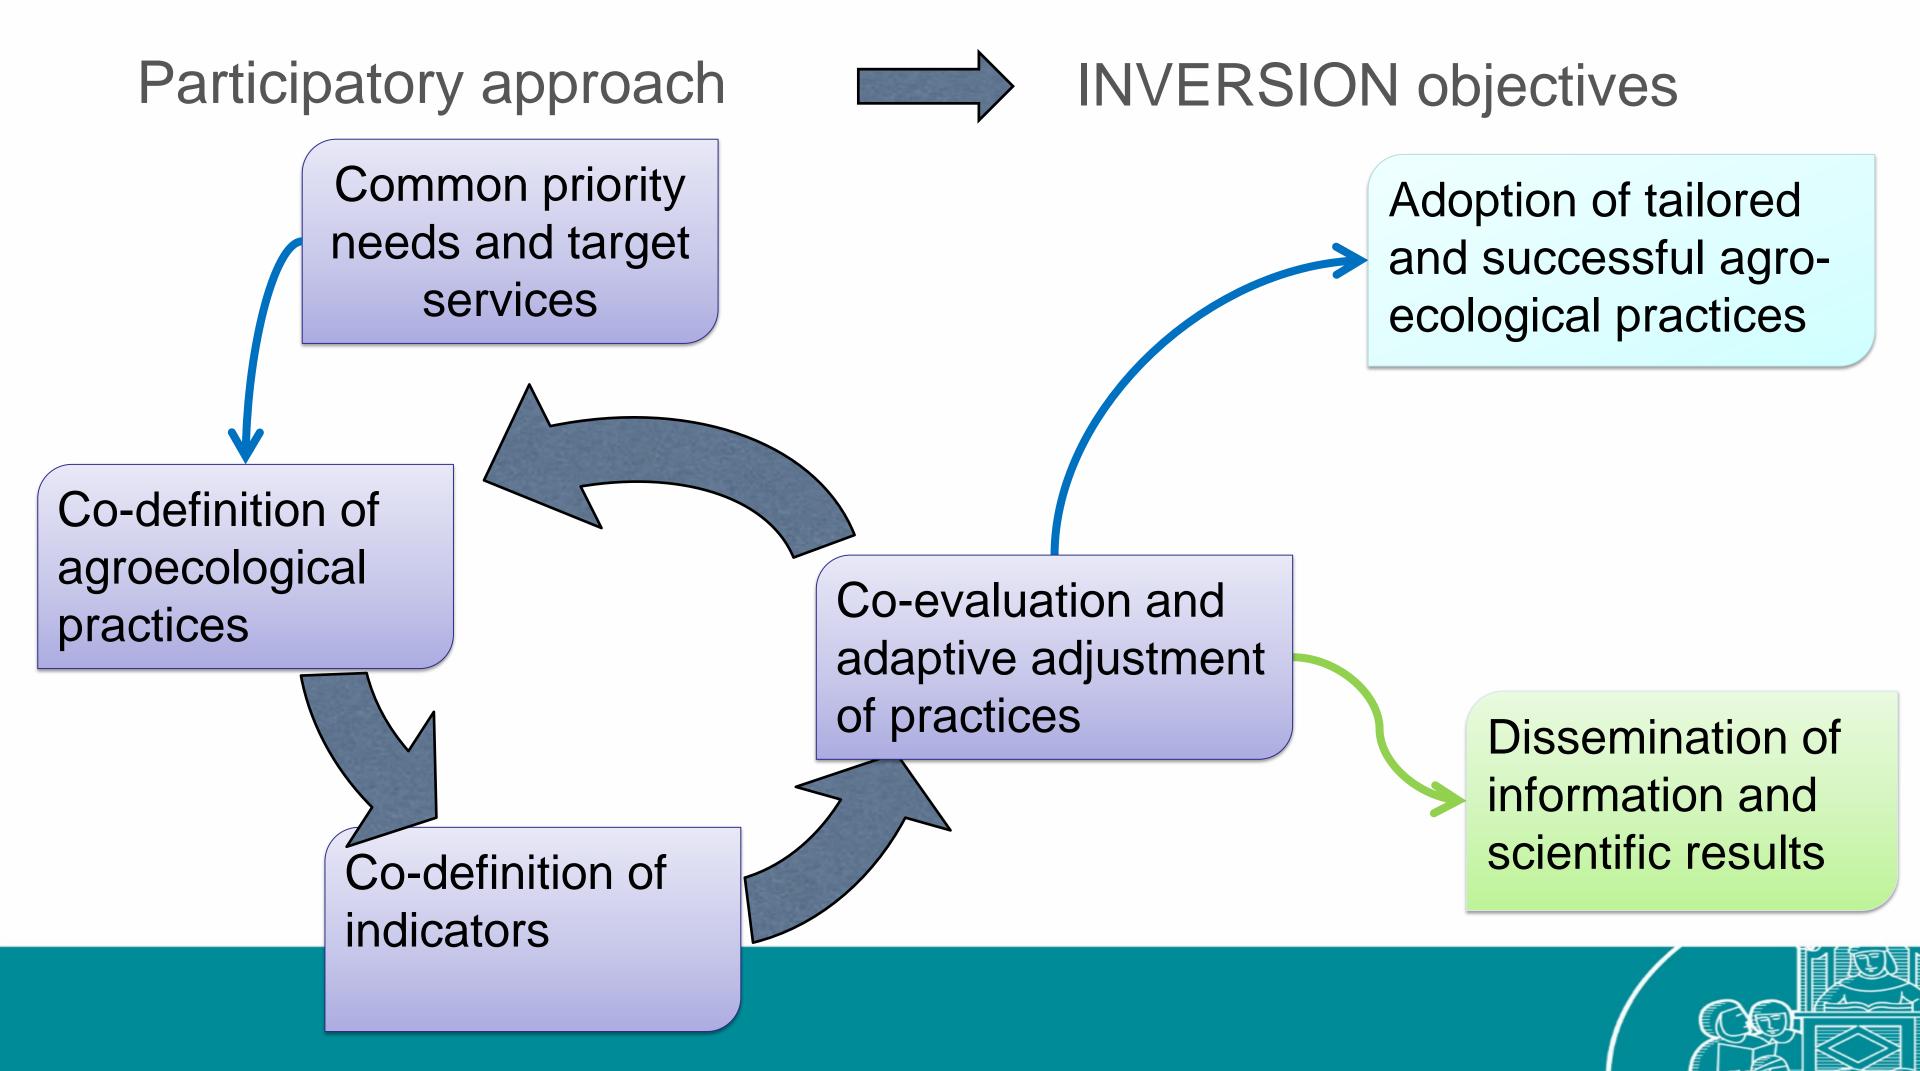

Participatory approach

Innovation broker is a farm (responsible for the coordination)

- •6 farms
- •1 Museum-association (Eco museo delle dolomiti del Garda)
- •1 Veterinary- technician

Arising conflict

- Generational conflict inside farm (no conflict between actor involved)
- Main conflict between (concentrate) feed dealer and Academic agroecologist

Questions for discussion:

How to increase awareness of agroecological practices that can increase economic, social an environmental sustainability of farms?

What can be done to get close to farmers who need guidance in agroecological transition?

- How to reach them?
- How to help them?
