www.agroecology-europe.org

Agroecology Europe, the European association to promote agroecology, was created in 2016 by 19 founders from 10 countries.

We understand agroecology jointly as a science, practice, and social movement. Our approach encompasses the whole food system from the soil to the organization of human societies. It is value-laden and based on core principles.

OUR VISION

Agroecology Europe intends to place agroecology high on the European agenda of sustainable farming and food systems.

We foster interaction and knowledge sharing to create an inclusive European community of professionals, practitioners, and societal stakeholders in agroecology.

OUR OBJECTIVES

- 1 Foster exchange and collaboration between scientists, advisers, farmers, food producers, consumers, other stakeholders, and citizens in Europe;
- 2 Incentivise, coordinate, and facilitate research, education and agricultural extension;
- 3 Disseminate all aspects of agroecology and sustainable development of agricultural systems;
- 4 Disseminate agroecological initiatives, techniques, and practices among interested stakeholders;
- 5 Foster international cooperation;
- 6 Engage in and facilitate debates to clarify the relationship between agroecology and other approaches, such as organic farming, permaculture, biodynamic farming, climate smart agriculture, ecological farming, and sustainable intensification;
- 7 Support farmers' organizations working in agroecology;
- 8 Act as a think tank for addressing present and future challenges of European agriculture;
- 9 Support governmental and non-governmental organizations for improving their capacities in agroecology;
- 10 Promote agroecology in society as a whole;
- 11 Create a community of professional agroecologists;
- 12 Liaise with similar regional, national, and international associations and societies and foster interdisciplinary and transdisciplinary research on agroecology.

OUR GOAL

The Association has a non-profit and international goal: it aims to analyse, design, develop, and promote the transition towards agroecological farming and food systems.

The goal of the Association is to support agroecological research, education, and training, share and disseminate agroecological knowledge, and promote agroecology in the farming and food sectors and in society.

WHY BECOME A MEMBER

We provide an exclusive platform for members to build the Association's position on key policy issues and identify priorities for EU policy interactions of the Secretariat in Brussels.

Joining the movement of hundreds of members—farmers, scientists, educators, experts—strengthens our collective voice, credibility, and weight to promote the agroecological transition.

Members can vote and get elected in the General Assembly, initiate and participate in working groups, and attend AEEU events at reduced cost.
